

1881

April 23^d

J. J. Morrell

Shrewsbury

April 23/81

My dear Sir

The copper mine
from which I sent you
the specimens is at present
being developed, and has
never been worked, a shaft
of about 70 feet has been
 sunk which shaft follows
a vein three feet wide

(the width between walls
is 60 feet-) this latter
expression I do not fully
understand but know that
you will. The other
covers an area of small
area and has never
been worked. I shall
only be too happy to
give you any further
information you want.

Dr. Harrington
The Hill College
Monticello

Yours sincerely
J. T. Morkill
