Kimear's Mills P. Q.
 April 25th 1884

Prof. Hanington P. H. D.

Dear Sir

Would

you be so kind as to inform me
 how to extract lime from water
 used to feed Boilers. Also having
 a choice of feed water ^{now} to find
 out which has least lime in it.

You will much oblige if you give
 me information on these points.

I remain

Yours truly

John Allan

P.S. It is the Carbonate
 of lime which is in the
 water and which is deposited in the Boiler. J. A. T.
