

Nov 24/81

Dear George

I have viewed
 the new catalog. I like Swifts
 the best. He has apparently
 some good and cheap instrumen-
 tments. One reason I wanted
 them was to ask whether
 you would like a good con-
 venient instrument for your-
 self. If it would be of
 use to you in connection say-
 ing with the Docket Club I
 think you might get one
 and make it your Christmas
 gift. I like very much Swifts'
 "Museum Students' Micro" at
 £6.10. It seems to me cheap
 and good and admits of
 many additions.

Next to this and

perhaps superior & fit for your
purpose I place Blankley
folding portable microscope
£3.10 without objectives, this
has the great advantage
of safe portability.

You may think of
this when you have time
and I shall send you
some more at the end
of the year.

Glad from your letter to
know that you are very
well employed. Please see
that you do not exceed
your strength & catch
cold from any under ex-
posure; and please do not be
shut to hear some really christian
teaching on Sunday when you
can
Even your loving father
W. Dawkins

About bubbles in snow as
Whitman has found out that
by very bolon deposited in
then and putting the slide
on a cold stone and using
or it a putting it in a
draught he gets rid of the
bubbles. This seems a
simple expedient perhaps
known before but ⁱⁿ Scott
and W. have discovered
it for themselves.

W.D.

P.S. Anna was detained
longer paying some visits than
she intended & now has had
to run off to an engagement
at the L. Benvolent she will
write probably by Courier.

Yours
M.
