

P.S. How many  
indeed extra copies  
of your paper from  
S. C. Dawson, you  
should have, you  
least 250, you  
mentioned at  
returning home  
the number of  
copies. M.D.

Stikenshaw,

Little Metis.

July 26/90

Dear George,

Mamma has  
I think already written  
to you with good wishes  
on your betrothal, and  
they now very sincerely  
wish you many happy  
returns thereof. I have  
your letter of July 22d  
and am glad to learn  
so much of your welfare.

I have received with  
great interest the proof of your  
Rocky Mountain article,  
and have read it with  
care. This week I shall

probably have the volumes  
 It is altogether a very  
 important contribution  
 to geology, and I hope  
 will be valued as it  
 deserves. I should  
 like very much to have  
 some copies of the  
 Abstract here if  
 possible, to send to a  
 few friends. I do not  
 receive the *concreta*  
*Journal* here, as it goes  
 to the college library; but  
 if you are to have any  
 author's copies I hope  
 you will be able to  
 have a few sent to

me by mail. If sent  
 to Montreal they will  
 be forwarded to this  
 place.

I am running down  
 this week to my old  
 hunting ground at the  
 Loggins to see what  
 new developments may  
 have taken place in  
 the last ten years.  
 This is the only geological  
 excursion I shall make  
 this year; but I have  
 revised in part my old  
 notes on the Plutocene

Shells be for a Museum  
memoir, and have been  
giving me a number of  
my old papers &c &  
putting them in shape  
for a connected republication  
of it should be at any  
time thought useful to  
attempt this.

We are all well here,  
The summer has been un-  
usually dry and warm  
for us, but it may  
break down in August.  
I am not going to any  
Association meetings this  
summer, as I must husband  
my strength for the winter.  
With all care  
Ever yours  
J. M. Dawson
