Aug. 6th 1900

Dear George

Many thanks for
yr letter & all it contains.
Our Saguenay trip was
quite a success we had a
beautiful day for the river
cloud - shadows adding to
the scenery - We also drove
to Lac Beauport, Rivière des
Loup & Tadoussac & saw all
the old places, & also the
many changes -

I am glad you felt
better for the few days but
you need many more
holidays -

Yr suggestion about
recollections of paper is excellent
& I wd delight in doing
it if the time cd be found.
I will try for it in any case

letters to stick to one school, there to change,
all my experience will bear me to agree with
this. For will now be in the 5th form, &
have made a little experiment before con-
tinuing of more mathematics & more before
leaving of he did well with the science before
& attending it is proved. I returned to
all I felt that it seems so unaccountable
& I hope he will do well. Another man
I would like to get him some out of class
work to do if at all possible, & I was
glad to think of this. There seems to
be numbers of railways, lanes & water that
I am very glad to see. I am glad that
they are the kind of work is of great value
as much as the men he was under
apparently & will be very much
and

As to the gun I think school
is to near to make it - were to
introduce a new & surpassing
interest - & I think Coraack
has had lots of fun, & play
& I want him to steadily
face the coming year & try
do better with his school
work - If you w^d write
to him when we get back
express your wish that he
w^d earnestly take hold of
lessons as a necessary step
to the future & promise him
a gun for next spring. I
think it w^d be better -

I w^d like to have had a
chance to talk with you
about several things but
I am so full of daily thoughts
that it is difficult -

Mother has very much re-
quested an eng. school for Coraack
but that w^d mean great
expense - & probably 3 yrs.
instead of two of school (if
is of little use) Papa ^{year} always
held strongly that it was
