

As librarian of the Royal Society of Medicine I could not fail to know his princely generosity: little trifles such as the First Edition of Harvey's De Motu Cordis were periodically spirited on to the shelves with ^{more} ~~the~~ same modest anonymity as others exhibit in depositing a recent tract. We had a joint scheme of getting all the old medical books segregated into a single room, so as to make them handy for reference and study; and further of grouping them under subjects, so as to facilitate historical research. In his own library Osler in large measure effected this, but in the Society's library the project has not yet materialised.
