My dear Osler,

My last will have given you some general idea of the condition of Nevis and its govern. This will not add much local news as I am not yet settled and can't yet get myself used to the idea that I may not get back to Canada this year. I now write to beg you to see that all my microscopical apparatus is very carefully packed - all the things being taken out of the very large binocular case and made to fit the smaller binocular - all the object glasses carefully pack in the cases and a case made for the two - I mean in the Cabinet. The specimens looked over and packed. I have nearly rewritten the fish part but can't finish till October. You are to have my instruments surgical and stethoscopes but send my Clinical Thermometer. I don't want

to keep the Mountain Microscope stand and eye pieces so if  
you like to pack carefully all the rest of the apparatus  
up, you can have <sup>as a present</sup> the stand and Eye-pieces. I will  
not mail unto you the name of the Merchant at  
Halifax who ships goods out to this place and if  
the Express will take the things down to Halifax they  
can come out here to me. But very they must be packed  
up and packed in book-binders Starlings paper. I  
am going up to the large Star fisher of which they are many  
to be had out here and I am watching a pair in lizards  
and turtles in Guana pens the last are only now breeding  
so I shall not enough to begin with before October, but  
it is an advantage to have them. The lizards here are  
very large and I hope for some good results. The School  
paid very little this year so I am not sorry to leave it  
although I do care a great deal leaving Richardson and  
my old friends of years - I can't think of Richardson without  
a choking for we are brother of years affection and when  
you can know how deeply I love him. I am however  
not acting from choice but from necessity and duty. I have  
made a purchase which I watched and cared will be  
a fortune to my children and however little I may benefit  
it is to them my duty that I should be here to see after  
its development. I hope be in Toronto in June unless

Mrs. Baileys comes this way to avoid a Canadian storm.  
I have not a bit of thin glass to see any thing with.  
The  $\frac{1}{8} 15$  was done for by its fall and Genist could  
do nothing with it - It got a crack right through  
it - I do hope you will work on for I have quite  
made up my mind that you are to get a field  
team for the East India Comp. Write me all the  
news and fully - Do look after my News-sources and  
see to them - Give my love to your good Father  
and to all who ask for me. I write you again by  
Airmail - Love for you dear boy.

With affect. J. Woodall
