From CANADA MEDICAL & SURGICAL JOURNAL. 1875-6. Vol. IV, pp. 202-6.

INTRODUCTORY REMARKS TO, AND SYNOPSIS OF,
PRACTICAL COURSE ON INSTITUTES OF MEDICINE.

by William Allen M.D. Prof. of Medicine

Oct. 1875

In the brief opening address he makes a vigorous plea for the use of the microscopes, and urges the students to possess one and hopes to persuade the Government to pass them free of duty for educational purposes.

He also looks forward to a physiological laboratory. Note that the Institutes covered physiology and pathology and therefore normal as well as morbid histology.

Just P
a follow

"* * * I trust the course today inaugurated contains the promise of better things to come; and I look forward to the time - not far distant I believe - when we shall have a well equipped Physiological Laboratory, in which students may not only obtain a practical knowledge of this important subject, but also, under the superintendence of a skilled assistant, be able to carry out and extend their physiological studies."
