

Can 11th & 12th Sep. Jan. 80-81 R.M. Oct. 1880

We must have been brought to it to find preference to
teach with his Hartman manuscripts.

In 1880 "Brief Discupⁿ" of the New Physic. Lab., he says

"during the first 3 years, I have had to use the practical chemistry
laboratory for the Saturday demonstration, another student
working room in the summer season for the histology class."

The Faculty finally decided to convert one of the 3 lecture rooms in
the med. fac. building into a laboratory.

He gives in the schedule a list of the apparatus which he has been able
to accumulate: 11 manuscripts Hartman; microtomes 3; Ludwig's
ultra-violet apparatus, Kymograph, time & stimulation apparatus - a very
fair lot of minor apparatus of the kind of Kromer's lab type
