

Dr. William Osler

COS 417/101.134

No. 1 Franklin Street, West.

Baltimore, Dec. 10th, 1904

Dear Pratt:-

Do keep your eyes open for any specimens of syphilitic aortitis in Boston in localized lesions of the aorta in young persons. Did I tell you that Longcope seems to have two perfectly characteristic specimens of the gumous mesarteritis.

Kemp will come down to our blood-plate symposium in February.

Did I ever send you a copy of the Gold-Headed Cane? If not, I expect to have one out for you in time for Christmas.

Sincerely yours,

W. Osler.
