Dear O

Yes. Grant had typhoid with secondary meningitis. I did not go up. Graham did not think it necessary as he seemed doomed from the outset, with most profound cerebral symptoms. It is very sad for them & the poor fellow was doing very well & had such good prospects.

That case would do splendidly for the thesis. I am reporting one of spinal syphilis. We shall have a good meeting. I am busy at my cerebral palsies of children lectures. They will come out in 7, 14 & 21 of July in News. I have collected a large amount of material at our Infirmary & at the Penn. Inst. for feeble minded children. Shall be so glad to see you in Sept. Send on those encephalitis cases.

Yours sincerely,

Wm. Osler.

June 3 12.15 AM 1888 I have just left the death bed of Mrs. Foster - a sweet blessed character whose influence upon me and upon others has been great in -
