

(Dr. C. F. Martin, Montreal)

(handwritten)

(July) 7. 28. 02.

Dear Martin

Thanks for the microscope - which I will return in a few days. Keep memo of cost of express & the slides & add to your fee, which I will arrange. I too can find no parasites I do not believe the case is malaria, tho the parasites are said to have been found 7 w. ago in Cincinnati & a relative of the patient sent word that he had found them He is now in 9th week of an irregular fever. He has had an old aortic lesion - no signs of a fresh endocarditis tho. I believe the fever may be due to a recurrent form similar to those cases which I described in the Practitioner some years ago. Did you not write something on Splenic anaemia or Dr Bantis disease - if so send it to me. I am revising a paper.

Yours,

W Osler.
