Dear Thayer

Thanks for your letter - so sorry to hear that Sister Susan keeps so miserable. In her former attack it was several months before she got quite well. It is not likely that an endocarditis would have such irregular recurrences of fever. I hope the trip may 'set her up' Give her my love - 'tis too bad that she should have had such a long bout. Many thanks for the slides - the new stain seems very good. Mr B. keeps about the same. I fear he has endocarditis engrafted on the old lesion. The report from Chicago was most positive but I do not know the chap - I have written for the slide "Crescents would surely be in the blood by this time & an Astivo-autumnal infection lasting since the last week of May would surely by this time have a splenic tumor. It is delightful to hear that practice has been so good. You will find a progressive increase I am sure, and local work will grow I wish you would ask Brodel about an artist. Perhaps Kelly could spare Miss ? who has been doing the appendix work - She is A.I. It would be a great comfort to have one permanently. We enjoy this place very much; it is very like Bar Harbor I will write to Wilson. So glad you went to see the poor fellow. They have a fine group of fellows in Birmingham - all good friends of ours Mrs. Osler and Tommy send love

Yours sincerely

Wm Osler
