(Dr. Leonard Rogers)

1, West Franklin Street.

Baltimore, Md., Jan. 19th, 1905.

Dear Dr. Rogers:

I was much interested in the paper in the Lancet this week on the cultivation of the trypanosome out of the Leishman body, and then your slides came, which are very remarkable. I have sent them on to Novy for his inspection, and will let you know what he thinks of them. You are, I daresay, aware that he has been making a very thorough comparative study of the different forms of trypanosomes.

Sincerely yours,

W Osler

P.S. After the first of June I shall be in Oxford. The next time you come to England do let me see you.
