Dr. C. T. Howard

Dear Campbell:-

I am greatly pleased with your paper in the Journal of Medical Research. It looks ^a first rate piece of work and will increase your rising stock in the medical market. I have just had a remarkable case of polycythemia and cyanosis, on which a clinical lecture will appear in the Lancet very soon. It must be a primary bone marrow affair.

We had a very pleasant Christmas, and for a week we have had the most glorious weather - bright skies and plenty of frost. Tommy has been skating and has enjoyed it very much.

I hope things are going smoothly at the college. It will take some time before things can be straightened out.

Love to Marjory and Bill,

Yours truly,

W. Osler.
