January 31st, 1908

Dear McCrae:-

We have got Volume iii out in the English edition and it looks remarkably well. I am hoping to get off the balance of my manuscript within ten days. Gibson has been very much tied up and has not been able to give me much help. You will be able to get out Vols. IV and V before July. I should think if VI and VII came out next year that would be quite time enough. I hope you have got some good aneurism pictures ready. The Thoma plates are in the article on Dilatation Aneurism. I need not see the proofs of the illustrations. Sorry about the Endocarditis proof, but I have been holding it in the vain attempt to get Richard Stern's book on Traumatic Origin of Internal Disease, the second edition of which I had hoped to get at the College of Surgeons, but they have not either edition. It would be well, I think, to pick out a couple of x-ray illustrations from Baetjer.

Sincerely yours,

Wm. Osler.
