Dear Thayer

Many thanks for the bundle of reprints. I read with great interest your 3rd sound[?] article. Gibson has been working at it and will be greatly pleased to have your paper. He is a very good fellow but has too much teaching in connection with the Pathology classes. Are you coming over this summer? It is time you had 6 mos off. I hope to see you all in September. There will not be a large contingent from this side but very good men are going. What a development the Tb. work has had in Maryland! Hamman seems to be doing good work. Mr Phipps is a trump - I have had several talks with him about the new clinic. Meyer is the fellow to put it in good shape Peabody was here the other day - delighted that his son was going to you.

Cabot has been here & in London - enjoying his visit immensely - Rolleston & others gave him a very good time. I hope you notice in Vol IV how much inferior those heart articles are to the ones you could have written - I am disappointed in some of the sections - not quite up to date. Pratt's section is A.1.

I hope you will be off soon for a good rest.

Love to Sister Susan

Sincerely yours

W^m Osler
