(Dr. McCrae)

Wm.

December 2nd, 1911.

Dear Mac:-

Yes, I think that the diphthong ae may as well go, it has held its own long enough, so make it uniform. As soon as I get the slips pasted in, the section on Infectious Diseases will go to you. I do not know where the deuce Pellagra should go, ask Welch. I see in your letter of October 26th however that you say that he thinks it better to class both it and Beri beri as intoxications. The work about the last now seems pretty definite and clear, and Martin just tells me it should go with the foods.

I have not heard from Appletons about the type and the paper, and I have written to ask them twice to let me have samples.

Love to Amy.

Sincerely yours,

Wm. Osler.
