February 29th, 1912

Dear Mac.,

I think, after looking over the typhoid section, there is enough on paratyphoid. Some months ago I abstracted a long article in the Army Journal. I thought that you took it; I cannot find it here anywhere. What you have got there is, I think, quite sufficient.

I wish you would give instructions to use the English spelling of "Centre", "millimetre", etc. It makes no difference in America, and it does make a good deal of difference over here.

Have returned proof to end of Tuberculosis. Blood section goes this week, Heart next and Nervous System I hope before March 10th, so they cannot be very late.

Sincerely yours,

Wm. Osler.
