From the Regius Professor of Medicine, Oxford.

13 Norham Gardens.

18th. Jan. 1913.

Dear Harry T.-

Do you remember some years ago a remarkable girl in the out-patient department, who had atrophy of the subcutaneous fat of the upper part of the body? Was there ever a photograph taken? If so, could you send me one, and could find the notes of the case? A similar instance is to be shown at my section of the Royal Society of Medicine in a month or two.

I hope you are all well. We have had a very busy Christmas-- the house full to overflowing. Revere is very happy. He is going to spend this next year with a tutor, as he has to make up enough Latin and Greek to pass his entrance examination.

Love to you all, not forgetting Margaret.

Affectionately yours,

(Signed)

Wm.O.
