Mum

Dear Flexner:

Thanks for the journal which has just come to hand. Excellent paper! I was on the point of sending it to Norman Gwyn when I had a letter from him saying they had discovered the spirochaete in a case of infectious jaundice at the Number 1 Canadian General Hospital, France. The figures which he sends are identical with those given by the Japs. We had one fatal case at the Canadian Hospital, in Taplow, a few months ago, for which I will have specimens stained.

Greetings to you all.

Sincerely yours,

(Signed) Wm. Osler
