3. vii. 18.

13, Northam Gardens.

Oxford.

Dear Henderson,

Miss Romagnis case is most interesting -

initial stenosis pure of the French i.e. the form not due

to Rheumatic fever.

She has probably had it for years

and should 'go slow' as the cardiac reserves in such cases

are always low. She is fit - or will be, later, for light work.

With greetings and regards.

Sincerely yours

W. O. Osler.

at the lower Norman there was the remarkable ^{3^d} third sound
 of Thayer - a loud diastole between the ~~1st~~ ^{1st} and 2^d.

W.O.
